

**Model : Breva 750**

**Subject: Side bags**

After mounting the side bag attachments, it is necessary to check that the distance between the top of the silencer and the bottom of the bag is 15 mm at least.

If this distance is shorter, it is possible to lift the bag attachments by shortening of 10 mm the bushes placed between the attachments and the bike frame.

Should this minimum distance of 15 mm not be complied with, the bags could be damaged due to the heat produced by the exhaust fumes.
